The Shed Report

Around the Shed, there are some interesting nooks and crannies, one of which is, of course, "the Bat Cave", under the watchful control of "Batman." (AKA Graham)

Should you need something for a job, more often than you might imagine, you'll find it in the Bat Cave. Batman is not only the keeper of all things, nuts, bolts, screws, washers, rope, hinges, drawer runners, handles and much more but also a bit of a bicycle fanatic and tinkerer.

He has an impressive collection of parts and the know-how to bring all sorts of things back to life. Bikes, trikes, scooters, you name it, we get all sorts of items delivered to the Shed, and Batman works his magic on them. What starts out looking tired and worn can come out looking and working almost like new.

Should you need a repair, Batman will gladly take on the task. Whether it's a bicycle needing some attention, a scooter requiring a little TLC, or an unusual item that needs fixing, there's a good chance Batman can work out a way to repair it.

And what happens to these items once they're finished? Some are sold, helping to support the work of the Shed, while others find their way to community and charitable organisations where they can be put to good use.

With a little tinkering, a few spare parts and a healthy dose of Batman magic, some rather sad-looking machines emerge looking almost brand new.

We have a small group of workers who regularly visit the Shed with their carers and enjoy putting their skills to work making cutting boards. They can often be seen industriously sanding, shaping and styling their creations, taking great pride in the finished pieces.

Work on the restructuring of the Shed continues, with the new paint area now complete. The relocation of the paint stocks from the previous container to the new container has also been completed, as has the relocation of the yard maintenance equipment.

The old painting area is being transformed into a wood-turning area, with both lathes to be located there. The proposed relocation of the CNC machine may not go ahead, as the Board has allocated funds to purchase another machine with a laser head. This will open up additional opportunities for a wider range of projects.

Mobile phone tutorials are continuing in the IT area for those requiring hints and assistance on how to better utilise their mobile phones.

See you at the Shed! - **Charlie**

Inside Our Shed - New Administration Arrangements

Writer: John Williams - Men's Shed Reporter

At our recent elections, Marcus Humby was nominated and elected unopposed as the new Shed Secretary. Marcus has now settled into the front office and is already reorganising systems and establishing fresh routines. With extensive experience supporting not for profit organisations, he brings a steady hand and a wealth of practical know how. We're confident Marcus will give his new role his full energy and commitment.

As part of these changes, Marcus will not be at the Shed every day of the week. This means a few of our long-standing practices will need to evolve. We will no longer have a member permanently stationed in the foyer to handle reception duties, answer the phone, respond to urgent emails, take payments, or place orders. Instead, these tasks will be shared among members as needed. Marcus has full access to the Shed's emails 24/7 and he can promptly respond to them remotely.

Our front office is the first impression visitors get of our Shed, so we ask

everyone to lend a hand with a cheerful attitude when the phone rings or someone needs assistance. And if you're ever unsure, simply take a message and pass it on to one of the Shed Directors.

Together, we'll keep things running smoothly while supporting Marcus in his new role.

Inside Our Shed - Turning Scraps into Something Special

Writer: Steve O'Brien - Shed News Editor

Once again, we've been amazed by the creativity and ingenuity of our Shed members. One of the things we pride ourselves on at the Shed is our ability to look at something that might otherwise be thrown away and ask, "What could we make from this?"

Ian Wroe has certainly taken that philosophy to heart. No piece of timber is too small or too insignificant to be given a second life. Ian has recently turned his attention to creating beautifully detailed model cars, with an incredible amount of craftsmanship and attention to detail going into each one.

He has also begun making unique jewellery boxes from scrap timber offcuts. Each box is different, making them a wonderful example of how a little imagination and some Shed craftsmanship can turn leftover materials into something genuinely special.

Ian's creativity has undoubtedly been encouraged by working alongside John Rissler, our resident Shed recycling guru. John has a remarkable ability to see the potential in materials that many of us would simply regard as waste. Together, they are doing a fantastic job of making sure that even the smallest offcuts can find a new purpose.

With Christmas fast approaching, Ian and John are getting ready to produce a range of one-of-a-kind jewellery boxes. If you're looking for a special and unique gift for someone, why not consider something handmade rather than buying another mass-produced present? If you're interested in ordering a jewellery box, contact the Shed and we'll put you in touch with Ian and John.

And that's not all! Ian is also putting the Shed's CNC machine to good use, creating a range of Christmas decorations to hang on the tree. If you have an idea for something special that you would like designed and made, Ian may just be your man.

It's a great example of what the Shed is all about - creativity, skill, recycling and, most importantly, members having a go and turning an idea into something real.

Inside Our Shed - New Technology Coming to the Shed

Writer: Steve O'Brien - Shed News Editor

As part of our ongoing Shed reconfiguration, the Board has recently approved the purchase of a NEJE Max 4 V2 E80 laser cutter and engraver with Z-axis. This is an exciting addition to our equipment and will open up another range of possibilities for members to learn new skills, develop projects and perhaps create new items for sale through the Shed.

The laser cutter and engraver will complement our existing CNC equipment, giving members another way to design, cut, engrave and personalise a wide range of materials and projects. While the CNC allows us to undertake certain types of cutting and shaping, laser technology provides a different set of capabilities, particularly for detailed engraving, intricate designs, lettering and precision cutting.

One of the great benefits of bringing this technology into the Shed is the opportunity for members to learn something new. Not everyone will have had experience with laser equipment, computer-aided design or digital fabrication, so this will provide an opportunity to develop skills that may be completely new to them.

For some members, the technology may initially seem a little daunting. However, as with many of the machines in our Shed, the intention is to encourage members to learn at their own pace, share their knowledge and help one another. Those who become familiar with the equipment can then assist others, creating another opportunity for members to pass on skills and experience. Perhaps the most interesting aspect of the new equipment will be the way it can work alongside the skills and machinery we already have.

This combination of traditional woodworking skills and modern digital technology could allow members to take their projects in directions that previously weren't possible at the Shed.

Opportunities for Shed Projects and Sales
The machine may also provide opportunities to develop new products for resale. Personalised signs, engraved timber items, plaques, decorations, small gifts and other items could potentially be produced in the Shed.

The real benefit is that members will have the opportunity to experiment and see what works. An idea can start as a simple piece of timber or another suitable material, be developed on the computer, cut or engraved by the laser, and finally finished by hand in the Shed.

This gives members the chance to become involved in the whole process from an idea to a finished product. Of course, we will need to learn the capabilities and limitations of the machine, establish appropriate operating procedures and determine which materials and projects are suitable. Safety will remain a priority, as it is with all of our equipment.

The purchase of the NEJE laser cutter is more than simply adding another machine to the Shed. It is an investment in our members and their ability to learn, create and share skills.

Technology continues to change, and providing members with the opportunity to become familiar with modern equipment can be both interesting and rewarding. Some members may become enthusiastic designers and operators, while others may simply want to use the machine occasionally to add something special to a project.

Inside Our Shed - Helping Our Four-Legged Friends

Writer: Steve O'Brien - Shed News Editor

Our Project Team in the workshop was recently contacted by Amanda, the Hunter Volunteer Coordinator at RSPCA Hunter NSW, with a request that was right up our alley - could the Men's Shed help make some items needed at the shelter?

Amanda explained that the Hunter RSPCA Shelter currently has a number of dogs who, for various reasons, have been in their care for an extended period. The shelter was looking for a ramp that the dogs could climb and play on, while also helping them develop muscle strength, balance and overall fitness.

The question was simple: could our Men's Shed help?

The RSPCA NSW Hunter Shelter provides a safe haven, housing and veterinary care for vulnerable animals in need. The animals arriving at the shelter come from many different circumstances from surrendered pets and injured strays to animals rescued from neglect or mistreatment.

When the request came to the Shed, it didn't take long to get a positive response. With many of our members being keen dog lovers, Ray Broadbent immediately got the workshop team thinking about how we could turn the RSPCA's idea into reality.

Before long, the team was underway, putting their skills and experience to work to construct a sturdy and practical ramp for the shelter's four-legged residents.

It's another great example of how the skills developed in our workshop can be put to good use in the wider community. While our projects may often start with a piece of timber and a good idea, it's especially rewarding when the finished product is going to make a difference, even if the recipients have four legs and wagging tails!

We look forward to seeing the ramp in action and hope it provides plenty of exercise, enjoyment and, perhaps, a few happy doggy zoomies along the way.

Inside Our Shed - Supporting YWCA Hunter's 'Walk for ENCORE'

Writer: Steve O'Brien - Shed News Editor

Our Shed is becoming increasingly involved with other not-for-profit organisations throughout our region, and it is great to see our members using their skills to support worthwhile community causes.

Recently, the YWCA Hunter Region contacted us to see if the Maitland Men's Shed would be interested in donating a handcrafted item as a raffle prize for their 2026 Walk for ENCORE. We were only too pleased to get involved.

ENCORE is a free exercise and wellbeing program run by YWCA Hunter Region for local women following breast cancer surgery and treatment. The program combines gentle exercise with education and relaxation, while also providing an important opportunity for participants to meet, socialise and connect with others who have shared a similar experience.

The annual Walk for ENCORE will be held at Empire Park, Bar Beach, on Saturday 31 October, with funds raised helping to ensure the ENCORE program can continue to be provided free of charge and remain accessible to local women.

Our Shed has donated two handcrafted raffle prizes - a coffee table and a cutting

board. Both items were made by one of our members using leftover timber offcuts. Not only are they beautifully crafted, but they are also a great example of recycling and making good use of timber that might otherwise have been discarded.

This is exactly the sort of community involvement that makes being part of the Shed so rewarding. Our members can put their skills to good use while supporting organisations that are making a real difference in the lives of people in our local community.

Organisers are hoping for an even bigger turnout for this year's walk. Whether you walk with family and friends, join a team, help with fundraising, or simply come along to show your support, your involvement will help make a difference.

If you would like to take part in the Walk for ENCORE, make a donation or find out more about the event, contact the YWCA Hunter Region on 02 4929 2954 or visit their website for registration and further information.

Inside Our Shed - El Niño: What It Means for Us This Summer and How to Prepare

Writer: John Williams - Men's Shed Reporter

El Niño is now firmly in place in the Pacific, and climate agencies warn it will shape Australia's weather through spring and summer. According to the Bureau of Meteorology, El Niño typically brings drier conditions and hotter temperatures to eastern Australia, increasing the risk of bushfires, heatwaves and water stress.

But El Niño doesn't mean no storms, in fact, NSW SES cautions that it can create greater weather variability, including dangerous storms, damaging winds, large hail and flash flooding when conditions align.

What Shed Members Should Expect

- Hotter days and warm nights - BOM says temperatures are likely to sit in the top 20% of all records this spring and summer.
- Less predictable rainfall - generally drier, but coastal troughs and thunderstorms can still deliver sudden heavy rain.
- Higher fire danger - dry lead-up conditions and heat increase bushfire and grassfire risk across NSW.
- Volatile storm season - strong winds can turn everyday items into projectiles; flash flooding remains a real possibility.

Storm-Season Preparation: Simple Steps That Matter

NSW SES responded to more than 23,000 storm-related incidents last season including thousands of fallen trees and damaged roofs. With El Niño increasing weather variability, a

few practical actions can make a big difference:

- Secure outdoor items Trampolines, chairs, bins and loose timber can become airborne in strong winds. Tie them down or store them securely.
- Clear gutters and downpipes Heavy bursts of rain can overwhelm blocked gutters, causing roof leaks and internal water damage.
- Trim overhanging branches Many storm callouts involve fallen trees - reducing weak limbs lowers your risk.
- Prepare a simple emergency kit Include medications, a torch, spare batteries, important documents, and enough water and food for 48-72 hours. Emergency services emphasise that people often underestimate how quickly access to essentials can be disrupted.
- Stay informed Use the Hazards Near Me or BOM Weather apps for real-time warnings and set a watch zone for your area.

In Plain Terms for the Shed

Expect hot, dry weather, higher fire danger, and a storm season that may be more unpredictable than usual. Preparation now, not when the warnings appear, is the safest approach. Importantly, if you feel unsafe carrying out preparations, for example cleaning gutters seek help from neighbours or family.

Shed Member Profile - Frank Kirsten

Writer: John Williams - Men's Shed Reporter

Frank joined MCMS a little over two years ago, arriving with Ray after both transferred from the Beresfield Men's Shed. Somehow, he slipped through the newsletter profile net until now.

Born in the Warners Bay/Gateshead area to Slovenian parents, Frank grew up in a neighbourhood full of colourful characters and memories. He recalls "Williams the Baker delivering fresh bread with a horse and cart" and "Manuel the greengrocer ringing a bell and serving fruit around the neighbourhood from his barrow." Not all memories were quite so charming Frank still laughs about his mum yelling, "Here comes Mr Sh#tty, quick close all the windows," whenever the dunny cart arrived.

Frank left school at 14 years and 9 months, encouraged by his father (a BHP worker) to learn a trade. Despite dismantling the family lawnmower but not successfully reassembling it he began an apprenticeship at Young and Green Holden.

His career took him from the workshop to the road: first Firestone, then Yokohama, and finally Boral, where he helped establish Independent Tyre Service franchises. A family holiday to Canada coincided with a company restructure, prompting a return to Maitland. Frank spent his final working years as a wardsman and theatre assistant at Maitland Private Hospital, where he still joins his old team's lottery syndicate.

But Frank says his greatest achievement

wasn't career-related it was finding the right partner. During his Friday nights out in Newcastle, he spotted a woman across the room and was instantly smitten. She wasn't convinced, but Frank was persistent, charming, and occasionally cheeky warning off other suitors by telling them she was "a married woman with three kids." Seven months later, she agreed to marry him. They now have three adult children, including a son living in Canada.

Around the shed, Frank is known as a people person and a great listener who enjoys the company and conversation. He jokes that he should have been a counsellor rather than a mechanic, and honestly, he might be right.

Just a Little Joke

One day a famous man went to a nursing home to see all of his old friends again and see how there were doing.

When he got there EVERYBODY greeted him (because, of course, everybody knows him). One old man he noticed didn't come

up to him or say anything to him, so later he walked up to the old man and asked him, "Do you know who I am?" and the man replied, "No, but you can go to the front desk and they'll tell you."

Most of us remember when keeping an eye on the grandchildren meant making sure they didn't climb too high, cross the road without looking, or get into the biscuit tin! These days, there is another place where our grandchildren need a little guidance - the online world.

Children use phones, tablets, computers, gaming consoles and smart TVs from a very young age. The internet can be a wonderful place to learn, play and keep in touch with friends and family, but there are also risks.

The Australian eSafety Commissioner has some excellent advice for grandparents and carers. You don't need to be a computer expert to help keep your grandchildren safer online. The most important thing - keep talking. One of the best things we can do is take an interest in what our grandchildren are doing online. The aim isn't to interrogate them. It's to let them know that they can come to us if something goes wrong. Children may be reluctant to tell an adult about something that has happened online if they think they will immediately get into trouble or lose their device. eSafety recommends keeping communication open and reassuring children that they can ask for help.

Don't assume everyone online is who they say they are. This is particularly important with online games and chat. A person who says they are "12 years old and live nearby" may not be telling the truth.

Encourage grandchildren to only communicate with people they know and trust. Be careful about accepting new friend or follower requests. Never arrange to meet an online contact without a trusted adult knowing. Block people who make them uncomfortable. Report inappropriate behaviour or unwanted contact.

Gaming can be great fun, but many games now include chat, messaging and the ability to meet and communicate with strangers. eSafety recommends checking privacy settings and removing people they don't know from friends or contact lists. Keep personal information private. This is something we can all understand.

Tell grandchildren not to give strangers personal information such as their full name, home address, school or sporting club, phone number, passwords, date of birth, where they are going or when they will be away from home.

Even photographs can sometimes give away information. A photo of a child in a school uniform, for example, may reveal the name of their school.

It's also worth remembering that photographs and videos shared online can be copied and passed on to other people. Once something is online, it can be very difficult to get it back. Think before posting photographs of the grandchildren. Grandparents love taking photographs and understandably so. But before posting that wonderful photo of the grandchildren on Facebook or another social media site, check with their parents first. Even apparently harmless photographs can reveal information about a child's location, school, sporting activities or daily routine.

A good rule is, if in doubt, don't post it and remember that a photo sent privately can still be copied or forwarded by someone else.

Help them recognise a scam. Scammers don't just target older people.

Continued Next Page

Children and teenagers can also be approached with fake competitions, free gifts, game rewards, fake accounts and links designed to steal information. Teach grandchildren to stop and think before clicking. Don't rush because someone says you must act immediately. If in doubt, ask Mum, Dad, Grandma, Grandpa, a carer or another trusted adult before clicking or giving information. Remember, never give anyone your password, even if they claim to be a friend or someone helping with a game.

What if something goes wrong? This is perhaps the most important message we can give our grandchildren: "If something online makes you uncomfortable, tell me. You won't be in trouble." They might see something frightening, receive an unpleasant message, be bullied, be contacted by a stranger or accidentally click on something they shouldn't. Our first reaction should be to listen and help, rather than immediately blaming them.

If necessary, tell them to stop communicating with the person. Take a screenshot if it is safe to do so. Block the person or account. Report the content or account through the relevant service. Tell a parent, carer or another trusted adult. eSafety provides advice about reporting and dealing with a wide range of online problems.

Don't be embarrassed if you don't understand the technology. This is one area where grandchildren can sometimes teach us! You don't have to know everything about TikTok, Roblox, Minecraft, Snapchat, YouTube or whatever the latest app happens to be. Ask them to show you. A simple: "Show me how that works." can be a great way to understand what they are doing and start a conversation about staying safe.

eSafety's grandparents and carers guide encourages adults to become involved in children's online activities and learn about the technology they are using.

One final piece of advice. When we are looking after our grandchildren, we don't have to become their IT department or police officer. Our job is much simpler. Take an interest. Set sensible boundaries. Protect their privacy. Encourage them to think before they click.

And, most importantly, make sure they know they can come to us when something doesn't feel right. Just as we teach our grandchildren to look both ways before crossing the road, we can teach them to STOP – THINK – CHECK before stepping into the online world.

The Australian Government's eSafety Commissioner has a free Online safety for grandparents and carers guide with practical advice about devices, gaming, social media, cyberbullying, privacy and what to do when something goes wrong.

October Community Noticeboard

Maitland Riverlights Festival – A Celebration of Culture, Community and Connection

Saturday, 10 October 2026 | The Levee, Central Maitland | 2.00 pm – 9.00 pm | Free entry

Maitland is set to come alive on Saturday, 10 October, when the Maitland Riverlights Festival returns to The Levee in Central Maitland. Riverlights is a wonderful celebration of the many cultures that make up our local community. The event will transform The Levee into a vibrant Global Village, providing an opportunity for people of all ages to experience different cultures through food, music, dance, language, art and storytelling. More than 50 cultures and nations are expected to be represented, with more than 20 cultural villages providing visitors with the chance to discover something new. Visitors can collect a free Cultural Passport and explore the various villages while learning about the traditions and customs of communities from around the world.

There will be plenty to see and do throughout the afternoon and evening, including live performances, cultural demonstrations and activities. The World Stage, Language Lounge, Groove Fusion Stage and Global Kitchen will offer a taste of the diversity and creativity represented across Maitland and the Hunter region.

As daylight fades, the festival takes on an even more spectacular atmosphere. The celebrations move towards the Hunter River for the Riverlights parade and community lantern flotilla, with illuminated lanterns, performances and a spectacular light display providing a memorable finale to the evening. The festival is more than simply an evening of entertainment. It is an opportunity for our community to come together, meet people from different backgrounds and learn about

the cultures that contribute to the character of Maitland.

For members of our Shed and their families, Riverlights offers a relaxed and enjoyable way to spend an afternoon and evening. Whether you are interested in trying food from another country, listening to music, watching the performances, exploring the cultural villages or simply enjoying the atmosphere, there should be something for everyone.

With free entry and a family-friendly program, Maitland Riverlights is an event well worth putting in the diary.

So, mark Saturday, 10 October 2026 on your calendar and head into Central Maitland to enjoy Riverlights – a celebration of diversity, friendship and community.

For the latest program information, visit the official Maitland Riverlights website.

Lessons in Disaster

On Wednesday, 21 October, Maitland will host Lessons in Disaster, an important one-day training program presented by Gender and Disaster Australia.

The session looks at how disasters and emergencies can affect people in different ways, and how gender expectations can influence the way people prepare for, respond to and recover from disasters. It also explores the increased risks that can arise for vulnerable members of our community during and after a disaster.

The training encourages participants to look beyond the immediate emergency and consider the needs of the whole community. By understanding these differences, emergency services, community organisations, volunteers and local groups can help create safer, more inclusive and resilient communities. With disasters becoming an increasingly familiar part of life in Australia, Lessons in Disaster provides a valuable opportunity to learn from experience,

challenge assumptions and consider how we can better support one another when disaster strikes.

What to Expect

- The training will run from 9:30am to 4:30pm.
- You'll receive a link to download and print the Participant Guide in your Eventbrite confirmation email.
- A light lunch will be provided.
- Please register via Eventbrite so your accessibility and dietary requirements are captured. Please note, we'll do our best to accommodate all requests, but we can't guarantee every request will be met.

This training is Free of Charge thanks to funding by the Australian Government Department of Social Services.

Location

Maitland Business Central

14 Bulwer Street

#Suite 2, Level 1 Maitland, NSW 2320

As men get older, our social circles can sometimes become smaller. Retirement, changes in family circumstances, moving away from work and simply the passing of time can mean that we don't see some of our old mates as often as we once did. That's why maintaining friendships is so important.

At our Shed, friendships often develop without us even thinking about it. We might start the morning discussing a job that needs doing, helping someone with a piece of timber or working out how to fix something. Before long, the conversation has moved on to families, sport, gardens, holidays, cars, old working days and plenty of good-natured banter. Sometimes the best conversations happen when we aren't actually trying to have a conversation.

We Look Out For Each Other

One of the great strengths of our Shed is that members look out for members. We get to know the people we see regularly. We notice when someone hasn't turned up, when someone isn't quite themselves or when a mate might need a bit of extra help. It might be nothing more than asking, "Where have you been?" when someone misses a couple of days. It might be sitting down over a cup of tea and having a chat. Or it might be encouraging a mate to speak to someone if things aren't going well. We don't have to be experts, counsellors or medical professionals. Sometimes being a good mate simply means being there, listening and letting someone know they are not alone.

Working Together Brings Us Together

Our projects demonstrate just how much members have to offer. Whether it is working on the Shed layout, sorting and storing the large clamps, helping with the

new paint shop, revitalising the garden beds, producing picture frames in the mezzanine area or restoring an old piece of furniture, there is always an opportunity for someone to contribute.

Members have different skills, different experiences and different abilities. Some are particularly skilled with machinery and tools while others have knowledge of painting, gardening, building or repairs. Some may not consider themselves particularly skilled at all, but they are willing to have a go and help where they can. And that is the beauty of a Shed. Everyone has something to contribute. It's OK just to come along. You don't always have to be working on a major project. Sometimes a member might simply come in for a cuppa, have a chat and see what is happening. That is valuable too.

A Shed can provide structure to the week. It can give us a reason to get out of the house, get moving and interact with other people. For some members, that regular contact can be an important part of maintaining their wellbeing.

Keep An Eye On Your Mates

Men can sometimes be reluctant to talk about how they are feeling. We may be very comfortable discussing how to fix a machine, build a bench or repair a piece of furniture, but less comfortable talking about ourselves. That's where mateship becomes important.

If a mate seems unusually quiet, ask him how he is going. If someone hasn't been around for a while, give him a call. If someone tells you that things aren't going well, don't simply brush it off. A simple "Are you OK?" can open the door to a conversation and if someone needs more

Continued Next Page

help than we can provide, encouraging them to speak with a doctor or an appropriate professional is an important part of looking after our mates.

Our Shed Is Part Of Our Health

Good health isn't only about blood pressure, exercise, diet or medical check-ups. It is also about having purpose, friendship, connection and a sense of belonging. Our Shed gives us an opportunity to stay active, learn new things, share our skills, laugh together and build friendships. The projects are always important but the people are even more

important again.

So the next time you walk through the Shed doors, take a moment to look around. The bloke working beside you might be someone you've known for years. He might be someone you have only recently met. Either way, he is part of the Shed community.

Have a chat. Share a cuppa. Give someone a hand. Have a laugh and if a mate hasn't been around for a while, check in on him because ultimately, our Shed isn't just about the things we make. It's about the friendships we make along the way and that is good for men's health.

October Birthdays

Wayne Bailey, Anne Maree Herbert-Park, Andre Van Der Velde, Anna Jenkins and John Williams

Remember, This Is Your Shed - Be Proud Of It And Contribute Where You Can!
